

REINSURANCE BROKING TEAM OF THE YEAR

Winner: TigerRisk

✓ CRITERIA

- Demonstrating value-added or market-making activity to the re/insurance industry
- Responding imaginatively and creatively to clients
- Setting quality standards in information provision, reliability and speed of service
- Brokers may enter more than one team

The winner of this year's Reinsurance Broking Team of the Year Award was chosen by the judges due to their innovative approach to broking and the impressive breadth of experience within the company.

Formed in 2008, TigerRisk Partners is a privately-held reinsurance broker and risk/capital management advisor with a selective list of clients.

The company prides itself on superior performance, uniqueness and innovation, and to achieve this, has attracted a team of experienced industry experts.

The judges thought the firm's many years of combined experience on all sides of the insurance market, including cat model vendors, primary insurers, reinsurers, and brokers gave TigerRisk

an industry-leading insight into reinsurer pricing methodology, reinsurance design, and placement strategies and execution.

The individuals working at TigerRisk have a long history of innovating, creating, and working with some of the most highly regarded risk management tools in the industry.

It is clear TigerRisk has extensive experience in managing cat risk. The company's professionals have built catastrophe models at reinsurance companies, reinsurance brokers, primary insurance companies, and catastrophe model vendors.

Again, the judges felt this wide range of experience gives TigerRisk a clear vision of the strengths and weaknesses of the catastrophe models.

The company works on the principal that even more important than understanding the nuts and bolts of catastrophe models is understanding how to use the numbers they produce.

It is here TigerRisk's expertise in making real business decisions with model output allows its clients to get the most useful information, not just the most information.

The company also listens to its clients. TigerRisk has worked with several clients to define catastrophe risk measurement tools that empower decision-making throughout client organisations.

And by carefully selecting the right risk management framework the firm has enabled clients to create a common language for catastrophe risk used throughout their organisations, from individual policy underwriting to top level management.

As a result, the judges agreed the TigerRisk Decision Support Team was one of the foremost in the industry in facilitating catastrophe reinsurance placements while also being integrally embedded within clients' operations.
